

Policy brief: storage incentives after 2027

Larkspur Research policy desk, Q3 2026.

Summary

From 1 January 2027 the storage investment credit adds a 10 percent bonus for systems whose cells are made domestically. No sodium-ion cell plant is expected to be producing domestically before 2028, so the bonus favours LFP for at least the first year.

Timeline

Rule-making closes in November 2026. The first credits under the new rule are claimable for projects that start construction after 1 January 2027.
